To Whom It May Concern

Letter of Recommendation — Desy Maharani

I am writing to recommend **Desy Maharani**, who has worked as an AI Full-Stack Software Engineer at EnsoNex Sdn. Bhd. (a subsidiary of DMSA Global) for the past year. During this time, I have had the privilege of working closely with Desy — first as a senior colleague and, since July 2026, as her direct Technical Lead. I can speak with confidence about her technical ability, initiative, and the quality of her contributions.

EnsoNex is a creator-powered user acquisition platform serving major gaming publishers. Our technology stack spans React Native, AWS Amplify Gen 2, AppSync GraphQL, DynamoDB, and AWS Bedrock — a demanding full-stack environment that requires engineers to move fluently between frontend, backend, and AI-driven systems.

Desy's most significant contribution has been her ownership of the AI-Powered Creator Tagging System. She took full responsibility for the design, implementation, and iteration of this system — from defining the classification taxonomy to building the underlying scripts that automatically tag and categorise creators across our platform. This was not a task handed to her with a blueprint; she identified the technical approach, made key architectural decisions, and delivered a production-ready system that now underpins how we match creators to campaigns. The initiative and judgment she demonstrated throughout this project were well beyond what is typically expected at her level.

Equally impressive was her role in architecting our multi-portal SaaS platform. EnsoNex operates four interconnected portals — Staff, Creator, Agency, and Marketer — each serving distinct user types with shared underlying infrastructure. Desy contributed meaningfully to both the frontend and backend layers of this architecture, helping shape the component structure, navigation flows, and API integration patterns that tie the portals together. She consistently delivered clean, maintainable code and was proactive in flagging design or technical concerns before they became blockers.

Beyond her individual output, Desy has been an effective cross-functional collaborator. She worked closely with our product, design, and operations teams to translate requirements into technical

solutions, and she communicated trade-offs clearly to both technical and non-technical stakeholders. She adapted quickly when priorities shifted — a frequent reality in a fast-moving startup — and consistently maintained a high standard of work under tight timelines.

Desy is a capable, self-driven engineer who takes ownership, communicates well, and delivers results. I am confident she will be a strong addition to any engineering team, and I recommend her without reservation. Please do not hesitate to reach out should you require any further information.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'Bhaviinish'.
